Partner

RENTAL INDUSTRY

Automated•Rental•Management[®] (A•R•M) software from Business Computer Systems is the full-featured rental management and accounting system that rental companies need to access timely, accurate financial information and maximize staff productivity. The A•R•M system features 13 integrated modules, the award-winning MAS 90[®] accounting software for your core accounting needs, and several rental-specific modules.

Designed by rental experts, A•R•M gives you the power and flexibility you need to control inventory and track reservations; it also handles all of the standard billing methods. It was designed for companies that rent and/or sell light equipment, party supplies, tents, scaffolding, portable buildings, sanitation equipment,

plants, trailers, costumes, movie equipment and many others.

The process of “writing” customer rental orders and taking reservations is critical to your business. At the time a reservation/order is written, you need to have the following information at your fingertips: customer’s complete mailing and shipping addresses, the availability of specific items for sale and for rent, item pricing, quantity pricing, customer pricing, and costs and customer credit limits. A•R•M’s powerful report generator and inquiry options deliver the information you need, when you need it.

For rental order processing software that tracks every detail of your rental business, choose the integrated, feature-rich A•R•M and MAS 90 system. It’s a perfect fit for any type of rental operation.

FEATURES

Automated•Rental•Management® by Business Computer Systems

Multiple Billing Methods	A•R•M allows up to two billing codes on a contract by contract basis, and allows four different billing methods including Hourly/Daily/Weekly/Monthly, Long Term Recurring (pro-rata), Event-Based and Monthly. This flexibility makes A•R•M ideal for rentals in any industry.
Reservations Tracking	Reservations Logic accurately tracks available inventory. During contract or invoice entry, a single keystroke checks the availability of an item(s) for a specific date or dates.
Unit Tracking	A•R•M provides the ability to track all serial numbers for rental and/or sale items.
Route Scheduling	Multiple routes may be scheduled for each driver for each day and route tracking is provided.
Cash Management	Set up multiple graphical cash drawers and track deposits and payments on contracts and invoices. Cash advances and cash paid-outs can be entered and tracked by Cash Drawer Management.
Delete/Insert Lines	You may logically group items on contract by easily inserting or deleting lines on the contract.
Bar Code Integration	The ability to print and read Bar Codes is standard in A•R•M. Remote Data Collection Bar Code Readers are available as optional hardware for your A•R•M system.
Existing Contracts May Accept "Add-Ons"	For companies that use one of the repetitive billing methods, "add-ons" to the initial contract can be easily processed. Streamlined "overlap credit" automatically processes and synchronizes multiple shipment dates. The "association file" allows for returns to be processed against the parent contract and all of its associated add-ons at one time.
Intelligent Tax Calculation	Automated•Rental•Management knows how to handle complex sales tax issues including the Canadian tax laws.
Inventory Maintenance	The graphical Inventory Maintenance interface for Automated•Rental•Management even allows the ability to attach a Bitmap image file of the inventory item to the inventory maintenance program.
Separate Delivery/Return Instructions	A virtually unlimited amount of information can be added to the contract to aid in the delivery and/or pickup of equipment. This information is printed on a separate page(s) allowing the customer to review the contract without seeing this "special" information.
Multi-Locations	A•R•M has provided for multi-location operations to share data across a wide area network (WAN).
Report Generator	A powerful and easy-to-use graphical report writer is bundled with the A•R•M system. It enables you to create custom reports to meet your company's specific needs.
Accessory Items	An item can have a list of associated items that should be suggested for purchase or rental. A•R•M will automatically prompt the salesperson to include these items on the contract.
Multiple Companies	A•R•M provides the ability to set up multiple companies in a single location for rental and non-rental companies.
